

**PROJECT MANUAL GUIDE SPECIFICATIONS FOR:  
PFANNENBERG SERIES EB COMPACT PACKAGED CHILLERS**

**PART 1 – GENERAL**

**1.1 SUMMARY**

A. Packaged Chillers offer a self-contained means of producing cooling liquid primarily comprised of water, a mixture water and glycol, or low-viscosity oil. The cooling liquid (coolant) may then be pumped to heat exchangers or cold plates for a variety of applications including: 1) Cooling control panels containing sensitive electronic devices. 2) Cooling variable frequency drives that are contained within an enclosure, box, or console; 3) Cooling machine tool spindle motors; 4) Cooling reaction vessels (reactors) where process temperatures must be maintained or heat removed.

**1.2 SECTION INCLUDES**

A. Chillers, Packaged Chillers, Heat Exchangers, Cold Plates, and Cooling Devices as scheduled in this section and as indicated on the drawings.

**1.3 SUBMITTALS**

- A. Product Data: Submit the following manufacturer's documentation for each product specified.
1. Catalog specifications and outline drawings.
  2. Installation and operating instructions.
  3. Certifications to substantiate necessary agency approvals.
- B. Manufacturer Warranty
1. Manufacturer's warranty for Packaged Chillers and Air-to-Water Heat Exchangers.  
Manufacturer's standard 1-year warranty for Packaged Chillers and Air-to-Water Heat Exchangers.

## PART 2 – PRODUCTS

### 2.1 MANUFACTURERS

A. Basis of Design and Support: The packaged chiller is ideal for applications with cooling requirements of less than a half a ton up to 50 tons. It is a fully, self-contained, continuous source of chilled coolant – requiring only power and piping to provide recirculated chilled coolant for virtually any process. To ensure uniformity of operation, quality of construction, standard 1-year warranty term, and worldwide localized support, specifications are solely based, wherever practical, on the products of Pfannenber Inc. [www.pfannenberusa.com](http://www.pfannenberusa.com).

B. Substitution: Products of a similar nature from other manufacturers may be considered only when performance capabilities, component capabilities, installation capabilities, service capabilities, and warranty terms are fully met or exceeded.

### 2.2 PERFORMANCE / DESIGN CRITERIA

A. Packaged Compact Chiller Description. Series EB – Pfannenber Compact Chiller. Available in four frame sizes to support a wide range of capacities from 16,700 to 356,000 BTU (4.9 to 104.2 W) [1.39 to 29.67 TR], the compact chiller utilizes compressor-based refrigeration technology to cool water or a water/glycol mixture (coolant) and includes an integral pump to facilitate coolant circulation through remotely located heat exchangers or cold plates. The compact chiller shall contain a compressor-based refrigeration system, insulated coolant reservoir tank, coolant pump, finned-tube condenser, axial type compressor fan, stainless-steel brazed plate evaporator, electronic parametric controller, high & low refrigerant pressure switches, freeze protection, and an indoor/outdoor IP 56, NEMA 12/4 rated housing with polyester powder-coated galvanized steel panel construction.
